

FURNITURE DESIGN

a Coffee table

b Toybox

c Music Box

Audio/video storage study

"Music Box," analogous to the act of opening and discovering, is the reuse of an antique cabinet shell. It involves the study of its interior volume as a "site" for the insertion of shelves to support the modern audio electronica.

d Container

Multiple computer storage cabinet

The design issue for this cabinet became the need for the cabinet to not only serve as the storage space for a family's two personal computers housed, but to also provide a workspace that allows both computers to be used simultaneously. Modeled after the traditional secretary furniture style, the static cabinet shell unfolds to become a dynamic, open work space.
